

5th Street Bridge over Mad Creek, Muscatine, Iowa

Design Features:

- Designed - 2005
- Construction Spring - 2006
- Existing bridge included gate system which required closing bridge for protection of downtown in flood events
- New structure, coordinated with Corps of Engineers and the IDNR, allows for continuous use in flood events and allows for trail system connection underneath in normal flow periods

Shoemaker & Haaland has mastered challenges of site and budget constraints, neighborhood sensitivities and aesthetics... Thank you for a job well done.

*Randy Hill
Public Works Director
Muscatine, Iowa*
