

Downtown Streetscape Design, Mount Vernon, Iowa

Project Description

Shoemaker & Haaland teamed with the Vision Mount Vernon steering committee in 2005 to develop uptown streetscape improvement concepts. These concepts were based upon recommendations of the 1995 Mount Vernon Comprehensive Plan, and addressed stakeholder needs at that time. Community gateways were identified and concepts for visual enhancements were also integrated into the project.

Project Features

- Provide project coordination and public relations services
- Lead public workshops to gather stakeholder input
- Develop design concepts and related cost opinions for a wide range of streetscape improvements (including alley pedestrian connections from parking areas, back-of-building area visual enhancements, public gathering spaces and traffic calming in uptown, and street tree recommendations)
